

CHERRY ANGIOMA/ANGIOMA

AFTERCARE

AFTER TREATMENT

A laser passes through the skin, and the blood vessels in the angioma absorb the beam. After the treatment, the angioma should turn gray or another darker color. Treated cherry angiomas will then fade over the next 2-4 weeks.

POST TREATMENT INSTRUCTIONS:

Following the procedure, it is recommended that you use a gentle cleanser twice a day, in addition to moisturizer and sunblock for positive healing. No harsh products should be used until the skin is smooth and free of redness. You may shower, wash your face and exercise as you normally do after treatment. If multiple angiomas are treated, you may experience itching like a mosquito bite. Applying Benadryl or caladryl lotion and/or taking an antihistamine can improve the itching after treatment.
